

DEPLOYMENT PREPARATION

Pre-Deployment VoIP Checklist

To ensure optimal quality and a deployment without surprises, we have put together this checklist so your experience is smooth and efficient. Check off each verified item.

1 Equipment using analog lines

Is there any equipment that requires modifications because it uses analog telephone lines?

Alarm system

Fax machine

Interac terminals

Postage meter

Door-opening system

Intercom system

Other equipment

2 Network standards for IP telephony

Do the following capabilities meet the established standards for IP telephony?

Router capable of VoIP-oriented QoS

Gigabit switch, preferably PoE (Power over Ethernet)

Category 5e or 6 network cabling, depending on the type of business

Minimum Internet speed of 10 / 5 Mbps

I have read the checklist

Your signature confirms that every item was verified before deployment.
